

Subsea construction and marine services from conception to completion

TRESIOS is a project contractor specializing in subsea construction and marine services for the energy and maritime industry, founded by Wouter van Wagtendonk and Ferry Sanders. The owners both previously worked for Allseas, before becoming independent contractors where they met and joined forces. They excel in managing medium- to large-scale projects that demand comprehensive project management and a team of seasoned professionals.

'Our approach covers every phase of project execution, from tendering and initial engineering to vessel modification, repair, and maintenance,' explains founder and co-owner Wouter van Wagtendonk. 'We handle pipeline preparations, flexible installations, develop method statements for seabed interventions, conduct vessel audits and inspections, and manage procurement, logistics, installation, and demobilization.'

'Our meticulously planned process, supported by a certified and highly qualified workforce, ensures smooth and successful project operations. As a one-stop-shop contractor, we deliver tailored solutions that meet our clients' diverse needs with precision and efficiency.'

The strength of the company lies in its ability to adapt quickly and act decisively, drawing on its multidisciplinary expertise, an efficient working method, and an extensive network. This unique positioning guarantees efficiency and reliability for clients, partners and colleagues. Operating globally, the business tackles challenges head on, offering customized solutions with a dedicated team committed to achieving success together. 'We believe in working hard and having fun, creating success stories side by side with our clients, partners, and colleagues,' van Wagtendonk adds.

Excelling in energy and maritime construction projects, backed by unmatched experience, proven knowledge, and unwavering reliability, the company aims to be a trusted contractor

offering comprehensive services within these sectors.

With a commitment to excellence and innovation, it combines expertise across various disciplines to ensure the seamless execution of every project. From offshore subsea constructions and renewable energy projects to heavy marine transports, the team handles complexities with precision and efficiency.

Subsea construction services

Specializing in expert subsea construction services worldwide, both onshore and offshore, the company delivers tailored project solutions from initial tendering through work package preparation to on-site execution, ensuring precision and efficiency in meeting clients' diverse needs.

Its capabilities span a wide range of subsea activities, including the installation of SURF (Subsea Umbilical, Riser, Flowlines) systems, whether rigid or flexible, as well as petrochemical loading stations, platform, and subsea asset installations, or decommissioning. The team excels in pipeline and cable repairs, diving and ROV interventions, dredging operations, and installing mattresses and rock placements.

'We specialize in the global delivery of subsea construction services, both onshore and offshore,' explains van Wagtenonk. 'From tendering and work package preparation to execution on-site, we offer project solutions that cater to the client's varied needs.'

'There is often much more happening beneath the seabed than what we see above the water,' he continues. 'We play a key role in transporting and installing monopiles, cables, and pipelines, and in their repair. Additionally, we provide a comprehensive range of services, including engineering, logistics, project planning, and quality and safety monitoring.'

A key project showcase demonstrates the company's role as a one-stop-shop contractor specializing in offshore pipelines and petrochemical facilities. Its expertise covers the entire project lifecycle, from initial specifications to final installation. This includes line pipe fabrication, welding/NDT/FJC production, cofferdam or HDD construction, geotechnical interventions, subsea structures with risers, and tanker mooring systems, all aimed at ensuring the safe and efficient delivery of offshore loading pipelines for petrochemical products.

Marine services

With a strong maritime focus, the company ensures decisiveness, reliability, and expertise in every project it undertakes. Its Marine Services division offers a broad range of solutions, including maritime safety, reflagging, chartering, certification, inspections, surveys, demobilization, heavy transports, sea fastening, and mooring, towage, and vessel stability modifications.

'In addition to our subsea construction services, we provide comprehensive maritime services for projects worldwide. With a strong nautical orientation, we guarantee reliability and expertise in every project we execute,' explains co-owner Ferry Sanders. 'Our Marine Services Department covers everything from pre-charter audits to post-charter inspections, ensuring vessel compliance with industry standards.'

The team also specializes in heavy marine transportation, expertly handling the transport and installation of large and complex structures using LO-LO or RO-RO methods. Its commitment to maritime engineering excellence ensures each project is managed with meticulous care and professionalism.

For example, when a 330-meter-long bulk carrier, nearly split in half after running aground in Indonesia, arrived at a dry dock in China, the company stepped in to provide a solution. It calculated all necessary structural reinforcements, performed towage and lifting calculations per DNV regulations, and applied advanced design methods. This enabled safe and efficient project execution, ensuring the ship's successful recovery and repair.

Futureproof

Recently, TRESIOS announced a strategic repositioning focused on two core pillars: subsea construction services and marine services. This move clarifies the services provided and signals its shift towards becoming a full-service contractor. To further support this change, the company launched a rebranding initiative, aiming to make its offerings clearer to both current and future clients, while showcasing the expertise and services available to clients, partners, and stakeholders.

'With the refinement of our strategy and the launch of our rebranding, our core values remain unchanged,' confirms Sanders. 'These

values are in our DNA, defining who we are and what we're proud of. When you think of TRESIOS, you think of a full-service partner. We collaborate closely, and you become part of the family.

'Together, we make things happen. We are knowledgeable, always eager to grow and learn, and, above all, authentic. We're deeply involved in every project, always here for you, and that's where we truly stand out.'

As part of the company's new strategic positioning, a new logo and refreshed color palette have been introduced. The new logo reflects the various aspects of its services. Van Wagtenonk explains, 'The logo now combines a ship, a windmill, the sea, and the horizon, creating a recognizable symbol that highlights the versatility of the company and represents our two main specializations, each with three distinct services.'

The next step in its refined strategy involves separating the TRESIOS Crewing and Careers unit from the main brand. This business unit will now operate under the well-established brand MR. JAMES Workforce & Crewing. This move provides greater clarity and focus,

allowing both brands to grow and develop in their specific areas of expertise.

'We're thrilled about this next step in our strategy,' the founder states. 'We believe that separating the Crewing and Careers unit and rebranding it will bring more clarity and benefits to TRESIOS, MR. JAMES, our clients, partners, and the markets we serve.'

MR. JAMES is known for its personal touch. 'We don't just take the burden off our clients and candidates; we do so with a unique approach, leveraging our knowledge, flexibility, and unwavering dedication. MR. JAMES is always ready to tackle any workforce and crewing challenge,' concludes van Wagtenonk.
